

# How to Enable the Camera and Microphone on a Chromebook

If you go to a website like Google Meet or Zoom and the camera and/or microphone are not working or show as 'blocked', the first thing to try is to enable them through the browser. Here are the steps:

**Step 1:** Navigate to a website that needs access to the camera and microphone like meet.google.com.

**Step 2:** Once at the website, click the **Paddle Lock icon** located at the beginning of the web address bar at the top of the browser window.

**Step 3:** From the drop-down menus, set both the camera and microphone to '**Allow**'.
